Experiment IX: Angular Correlation of Gamma Rays Curran D. Muhlberger University of Maryland, College Park (Dated: May 9,) Using a pair of scintillation detectors and a coincidence circuit, we measured the angular correlation functions. Two general procedures for the measurement and analysis of angular correlations of gamma radiations from nuclear reactions are described which have wide applications in nuclear spectroscopy for the determination of spins and gamma-ray multipolarities.

Updated March 15 Gamma-Ray coincidence and. Co angular correlation. With two γ -ray detectors, it is possible to determine that two γ -rays are part of the same cascade. The angular correlation of the emitted radiation is more complicated than that of sodium. The correlation of the gammas can be understood by the following argument: The first gamma will have an angular distribution with respect to the spin axis of the nucleus; thus, its.

We measure the gamma-gamma angular correlation for the nucleus Ni60, resulting from the β^- decay of Co. We confirm the theoretical prediction that the gamma ray emission is quadrupole. Gamma-Ray Decay Scheme and Angular Correlation for ^{60}Co . Equipment Required involves the measurement of the angular correlation of these two gamma-rays, the determination of the anisotropy, and the coefficients of the correlation function. The decay scheme for .
