DX is an enhanced version of the industry's de-facto standard flicker noise. Noise reduction is the process of removing noise from a signal. All signal processing devices, both analog and digital, have traits that make them susceptible to noise. Noise can be random or white noise with an even frequency distribution. The Noise Reduction/Restoration > Noise Reduction effect dramatically reduces background and broadband noise with a minimal reduction in signal quality. This effect can remove a combination of noise, including tape hiss, microphone background noise, power-line hum, or any noise that is constant throughout a waveform. dB Noise Reduction specialists in the design and supply of customized noise control solutions. At dB Noise Reduction Inc. our objective is to select the best noise control solution for the application on every project we undertake, while keeping our customers' cost to a minimum.
